Clicker Docs

Clicker Docs transforms the iPad® into a portable elementary school word processor offering a range of writing support tools to enable students to create accurate, flowing documents.

Review writing with clear speech

Students use the child-friendly lowercase keyboard to type into Clicker Docs, and when they punctuate a sentence, their work is read back to them. This helps them to review their writing and find and correct errors for themselves so that they become more independent writers.

Increase writing productivity and accuracy with word prediction

The Clicker Docs word predictor suggests age-appropriate vocabulary based on the context of students' writing. The predictor encourages students to use more adventurous vocabulary, consistently reinforces the correct spellings of the words they wish to write, and really helps to speed up the writing productivity of children who struggle to transfer their ideas to the page.

Provide topic-specific writing support with Word Banks

Word Banks provide tabbed vocabulary support for any subject or topic. Students simply tap a word to add it to their document. As with the document and the predictor, Word Banks are completely speech supported – use the Sound Shift tool to listen to a word before selecting it. Create Word Banks in Clicker Docs, organized with either alphabetical tabs or topic tabs from any text and on any topic.

Personalized support for every student

Change how the app looks and acts to meet each student's learning needs. Available options include changing the speed and frequency at which Clicker Docs speaks, customizing the word predictor level, and using high contrast color schemes.

Designed with the classroom in mind

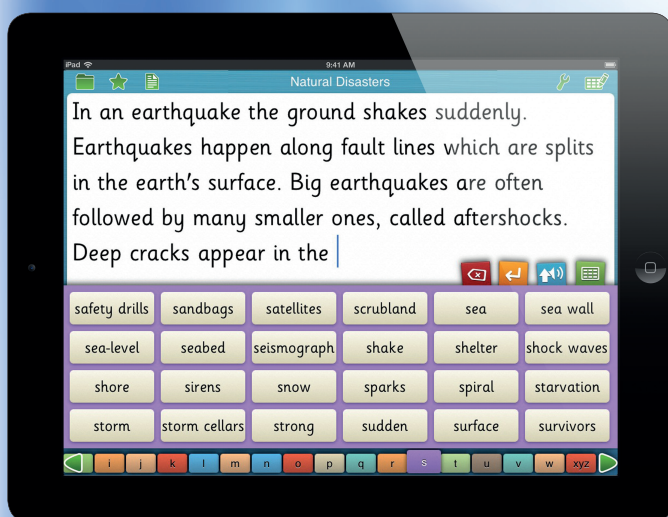

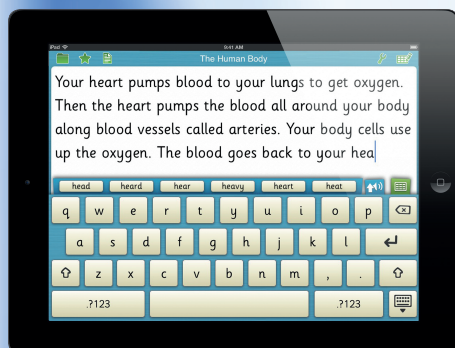

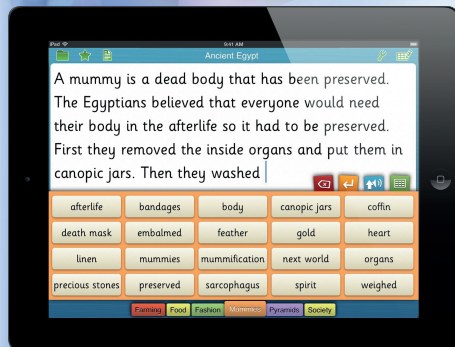

The child-friendly interface, lowercase keyboard, and Sassoon font create an engaging environment for your students to work in. Customizable settings make Clicker Apps accessible for a wide range of students.

Free resources

Access topic-specific Word Banks created by our curriculum team, searchable within the app. New resources are added regularly to our LearningGrids site. (www.learninggrids.com).

Clicker 6 compatible

Clicker Apps and Clicker 6 are able to work together. Create activities within Clicker 6 and then export them to your iPads, or open your students' Clicker Apps files in Clicker 6.

Please see the App Store for latest device specification.
